## **DETAILED ACTION**

### ***Response to Amendment***

Amendment, filed on January 15, 2004, has been entered and acknowledged by the examiner.

### ***Allowable Subject Matter***

Claims 44, 52-54 and 93-99 are allowed.

Regarding claim 44, the following is an examiner's statement of reasons for allowance: The prior art of record neither shows nor suggests a manufacturing method for a plasma display panel including the combination of all the limitations as set forth in claim 44, and specifically a deactivating step for subjecting a first plate on a deactivating process that deactivates reducing action of metal ions on Ag ions could not be found elsewhere in prior art.

Regarding claim 52, the following is an examiner's statement of reasons for allowance: The prior art of record neither shows nor suggests a manufacturing method for a substrate including the combination of all the limitations as set forth in claim 52, and specifically a deactivating step for subjecting a glass plate to a deactivating process for deactivating reducing action of metal ions on Ag ions could not be found elsewhere in prior art.

Regarding claims 53 and 54, claims 53 and 54 are allowed for the reasons given in claim 52, because of their dependency status on claim 52.

Regarding claim 93, the following is an examiner's statement of reasons for allowance: The prior art of record neither shows nor suggests a manufacturing method for a substrate including the combination of all the limitations as set forth in claim 93, and specifically a deactivating step for subjecting a glass plate to a deactivating process for deactivating reducing action of metal ions on Ag ions could not be found elsewhere in prior art.

Regarding claims 94 and 95, claims 94 and 95 allowed for the reasons given in claim 93, because of their dependency status on claim 93.

Regarding claim 96, the following is an examiner's statement of reasons for allowance: The prior art of record neither shows nor suggests a manufacturing method for a substrate including the combination of all the limitations as set forth in claim 96, and specifically a deactivating step for subjecting a glass plate to a deactivating process for deactivating reducing action of metal ions on Ag ions could not be found elsewhere in prior art.

Regarding claim 97, the following is an examiner's statement of reasons for allowance: The prior art of record neither shows nor suggests a plasma display panel including the combination of all the limitations as set forth in claim 97, and specifically wherein the facing surface of the first glass plate has been deactivated so that a total concentration of tin with less than four valence electrons, manganese with less than four valence electrons, iron with less than two valence electrons, and indium with less than two valence electrons in a vicinity of the facing surface of the first glass plate is 1000ppm or less to minimize any undesirable coloring also no other definitions for

deactivating a glass plate surface could be found in the art therefore the only way to deactivate the surface is found in the spec which would leave the substrate surface changed in that the metal ion are oxidized, the dictionary definition of deactivate would be even more narrowly interpreted could not be found elsewhere in prior art.

Regarding claim 98, the following is an examiner's statement of reasons for allowance: The prior art of record neither shows nor suggests a manufacturing method for a substrate in a plasma display panel including the combination of all the limitations as set forth in claim 98, and specifically deactivating a sodium borosilicate glass plate by applying a temperature of 500°C or higher to the glass plate in an oxidizing gas atmosphere for a predetermined time period to deactivate the reducing action of metal ions in the glass plate on Ag ions could not be found elsewhere in prior art.

Regarding claim 99, the following is an examiner's statement of reasons for allowance: The prior art of record neither shows nor suggests a manufacturing method for a substrate including the combination of all the limitations as set forth in claim 99, and specifically a deactivating step for subjecting a glass plate to a deactivating process for deactivating reducing action of metal ions on Ag ions could not be found elsewhere in prior art.
